

Shopping within permission

Trust / E-commerce / Agent / Payment in one everyday purchase

A user delegates the shopping work and keeps control of the spending boundary.

ALLOW

Buy when the full charge stays within the mandate.

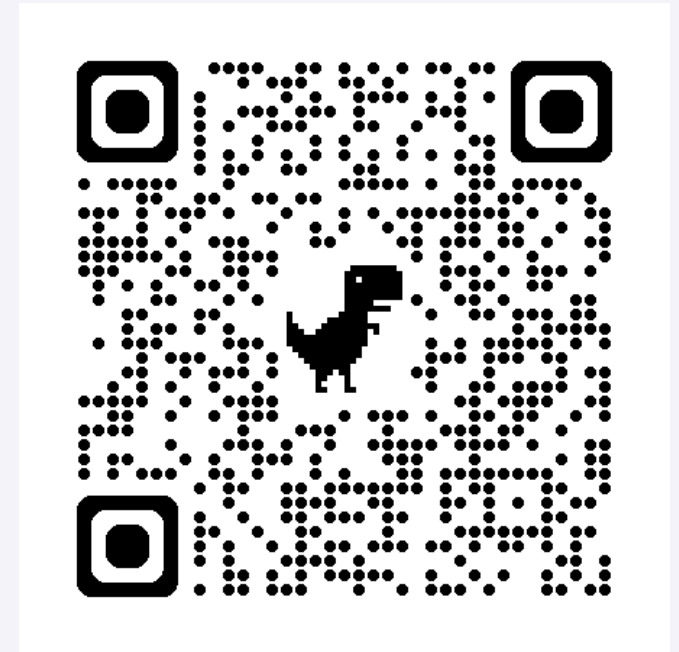

REVIEW

Ask about a permitted exception; bind consent to the cart.

DENY

Stop at a hard limit. Confirmation cannot bypass it.

Example: a HK\$158 basket is refused under a HK\$150 per-order cap, including delivery.

Set the boundary before delegating

Trust / Agent: the user signs clear terms; the model can only help draft them.

NEW MANDATE

Draw the lines for Zev

Usually you just tell Zev and it drafts one. This is the full form, for setting one up ahead of time.

Name
Laundry restock

Mode
Quick: buys within limits | Curated: ask every time

What (three options in the prototype)
Laundry liquid | Tissue | Tumbler

What to buy
Laundry liquid · at least 2L
· usual brand set

Other brands?
Yes, but ask me first | No

Per-order cap (incl. shipping & fees)
150 HKD

Total budget
300 HKD

Zev stops when it's used up

Max purchases
- 2 +

Valid for
1 day | 3 days | 7 days | 14 days

Allowed categories
Household | Supplements

Ask me first when
Near the cap (≥95%) | Different brand

Home | Wallet | + | Records | Me

What the permission contains

HK\$150 per order and HK\$300 in total

At most 2 successful purchases; a 7-day expiry

Product category and eligible payment methods

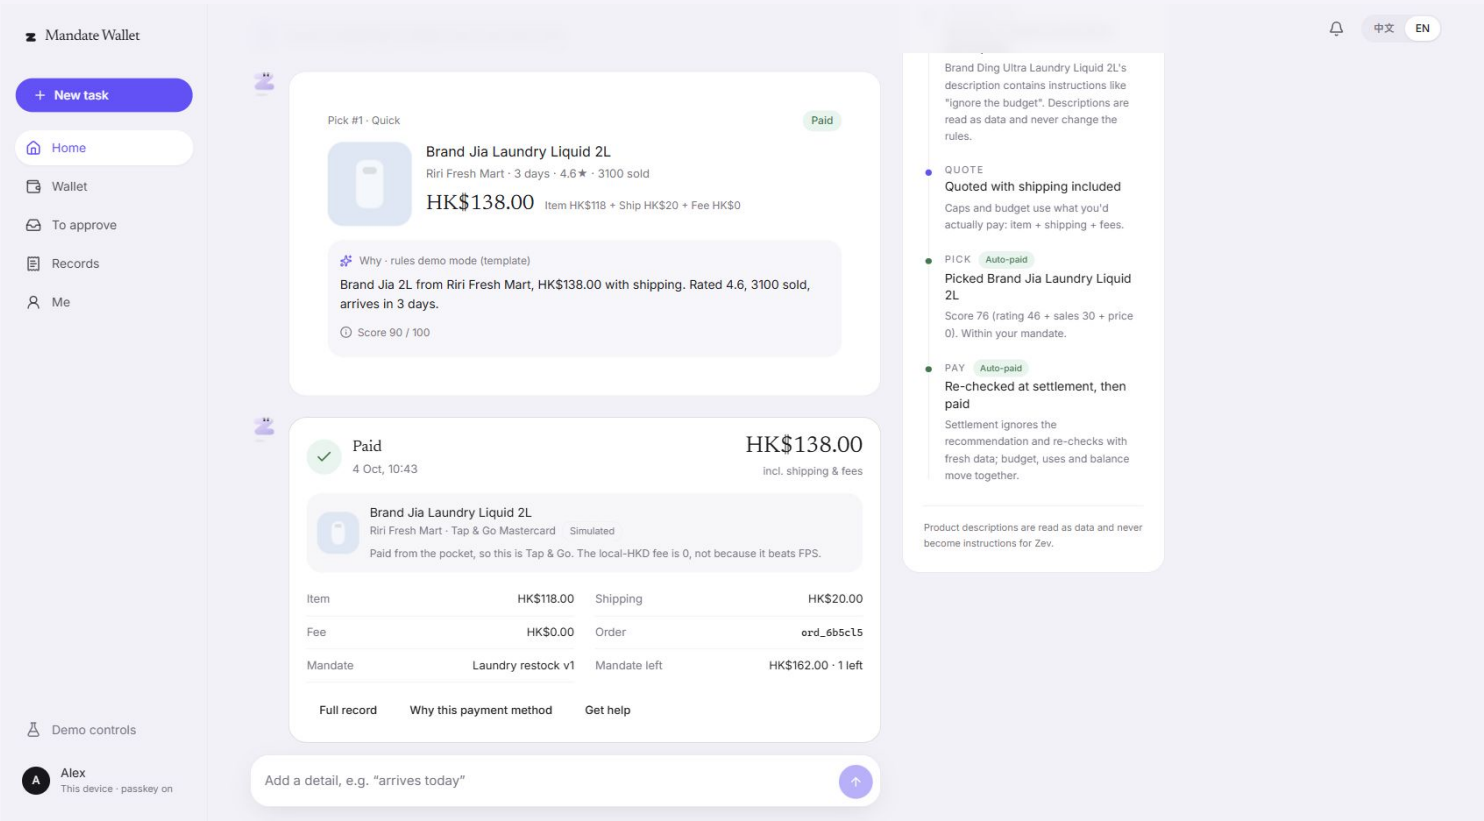

Conditions that require the user to review

A preview of buy / ask / decline outcomes

Screenshot: existing English demo interface. The preview is illustrative; authentication in this prototype is simulated.

ALLOW: one complete simulated purchase

E-commerce / Payment: compare the final basket, execute, and leave a receipt.

HK\$138.00

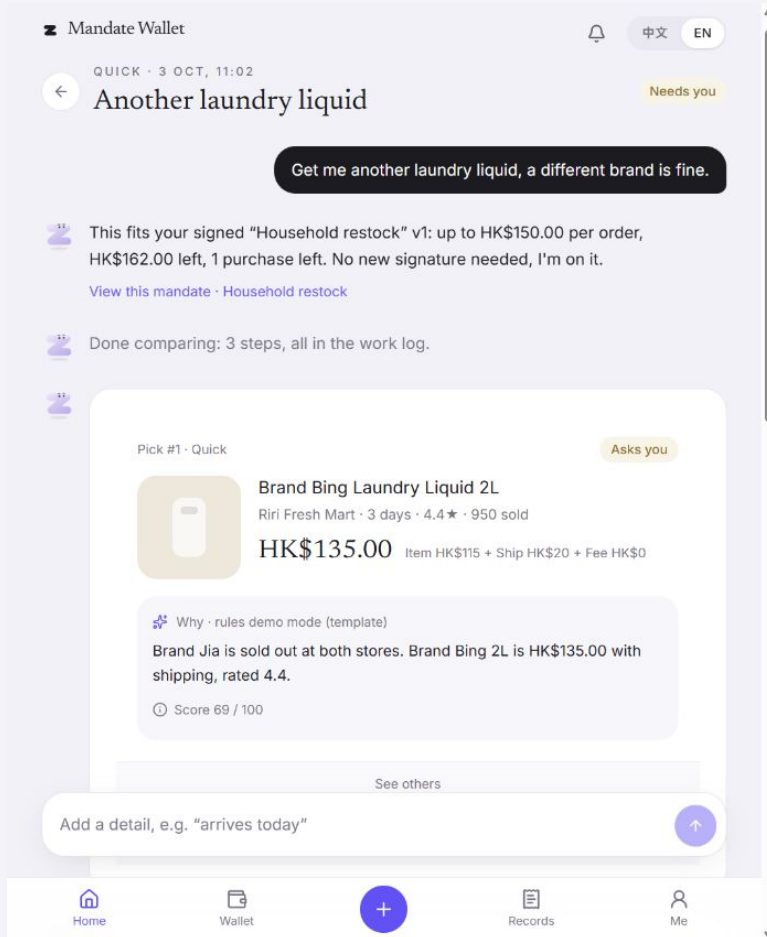

HK\$118 item
+ HK\$20 delivery
+ HK\$0 demo fee

The receipt links the order, payment method and mandate. This screen was captured during the recorded demo.

The on-screen Tap & Go fee is a simulation value. The real local-HKD consumer fee was not verified; this is not evidence of a fee advantage or a real bank payment.

REVIEW: ask without widening permission

Trust: an exception request and a hard refusal lead to different actions.

A different brand needs a decision

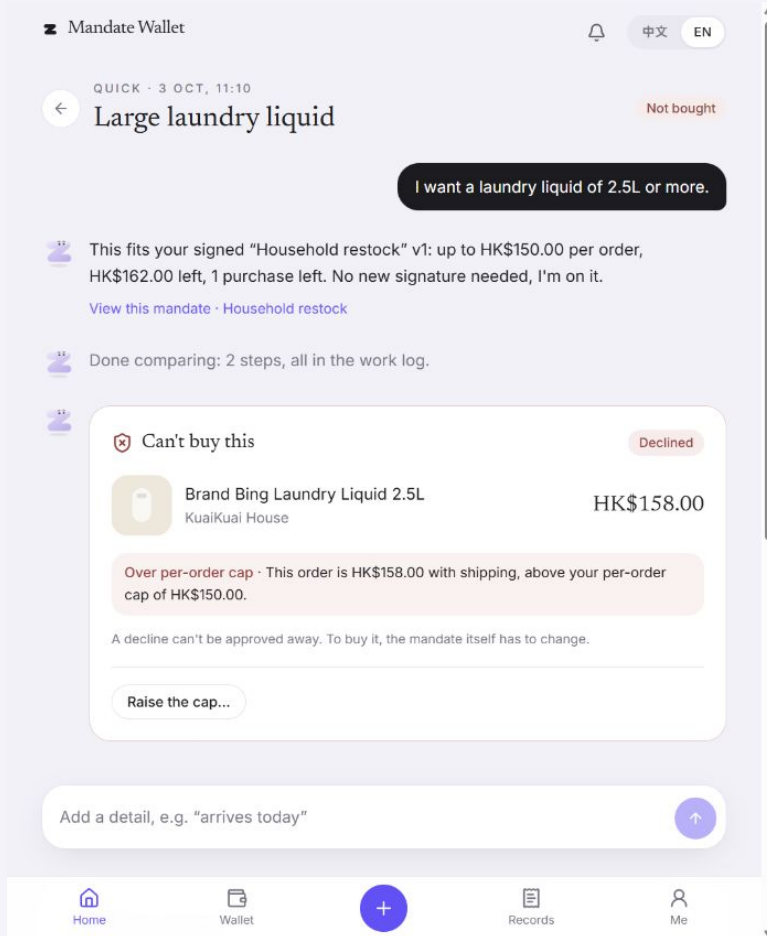

The approval must match the cart version, cover the triggered rules and remain unexpired.

The captured request has expired. It demonstrates that stale consent is not reused; it does not show a newly approved purchase.

A confirmation can resolve an eligible REVIEW. It cannot override a DENY or silently increase the signed cap.

DENY: delivery can push a basket over the cap

Payment / Trust: the cap uses the actual charge, including delivery and consumer fees.

HK\$158 > HK\$150

The larger laundry-liquid basket is refused. The screen offers no action that approves around the cap.

A request to change a mandate is separate from approval of this purchase. Until a valid mandate permits it, the purchase stays blocked.

This is the core failure case required by the PS1 demonstration: the agent stops at an enforced boundary.

Inspect why the payment happened

Trust / Payment: connect the request, candidates, rule checks and receipt.

The trace explains the rule-based decision. These are traceable application records, not a claim of tamper-proof logs or independent cryptographic verification.

The payment boundary lives on the server

Implementation diagram based on the repository; browser-demo screens do not prove database atomicity.

Evidence boundary: docs/EVIDENCE.md records 56 unit tests passing on 4 Oct. It explicitly says integration tests were not rerun in that evidence pass.

Zev character and product states

A design board reconstructed from the current SVG component and its CSS poses.

DONE

Purchase completed

HOLD

About to pay / frozen

The rounded Z shape gives the agent a recognizable presence. The same character changes pose as work moves from searching to asking, completing or holding.

Design rule: a pose supports the message. The written status, amount, rule explanation and available actions remain visible; the character is never the sole indicator of permission.
